

# How To Play

Flash Flags will help you memorise the flags of every country!

## Filter Flags

First of all, let's filter out all of the countries you already know. Tap on *Filter Flags* and start pressing the red button on all of the flags you're familiar with. From then on, any new game will only present flags you don't know!

You can add any filtered flags back into the mix by using the toggle at the top of the *Filter Flags* screen.

## Quick Start

*Quick Start* will instantly start a new game with five random flags from any continent.

## Start Game

When you tap *Start Game* you simply select how many flags you would like to learn and from which continent.

## During The Game

The key to successfully memorising anything is repetition. When the game begins, you will be presented with a list of flags, all you need to do is guess what country the flag is for and then tap it. The name of the country will display and you select *whether or not you answered correctly*.

## Progressing

At the end of every game you will be given your score, tap Retry and try to improve your score...keep going until you get to 100%! The game will be saved for you to retry at a later date, once you've memorised all of those flags you can delete the game by pressing and holding on it, filter the flags and get to work on the next ones!
